Reuse your bags

While grocery shopping, instead of buying a bag, I take mine bag or reuse an old plastic bag I have around in your home. Not only do I save money on bag purchases in store, I am reducing environmental pollution.

Recycle waste (organic, paper, plastic, glass, metal)

I try to segregation garbage, reduce the consumption of natural resources and the amount of waste.

ORGANIC

PLASTIC

METAL

GLASS

PAPER

Do you want our earth to look like this? Segregate, throw rubbish into the bin.

Save water

- When I washing dishes and bathing, I pay attention to how much water I use. I am saving water. The less water we use, the less runoff and wastewater that eventually end up in the ocean.

My trees

- Plant a tree. Trees provide food and oxygen. They help save energy, clean the air, and help combat climate change.

Don't throw your clothes away

- Clothes that we don't like anymore end up in the trash. Try to give them to those in need, just like me

Little chemistry

- I use cleaning products prepared by me at home – baking soda for doing the laundry, vinegar for cleaning floors.

How you to save our planet?

Thank you for your attention. Live ecologically for yourself and the earth ♥
